

Smartphone and Tablet Data Recovery

For over 30 years, DriveSavers has restored data and peace of mind for businesses and consumers around the world. Smartphones and tablets hold important data that could be devastating to lose.

- Photos
- Videos
- Music
- Contacts
- Notes
- Text messages

DriveSavers received its first iPhone for recovery less than a month after its release in the United States in 2007. Since that time, we have successfully recovered data from smartphones and tablets made by Apple, Google, Blackberry, Motorola, LG, Nokia, HTC, Samsung, Sony and other manufacturers.

We can recover data from any smart device and operating system.

- Smartphone
- iOS
- Removable storage
- Pay-as-you-go or prepaid phone
- Android
- Embedded storage
- Tablet
- Windows
- Blackberry

DriveSavers engineers work with the precision of microsurgions to routinely recover data others have deemed "lost forever."

- Logical failure
- Contaminated
- Forgotten passwords
- Water damaged
- Crushed

Certified Secure

What do you have stored on your phone?

- Financial information
- Photos
- Passwords
- Other sensitive data
- Business and personal contact information

Security of your information is vital. DriveSavers is the only data recovery service to provide proof of an annual company-wide SOC 2 Type II security audit.

Security Tips for Your Smart Device

Protect your on-the-go information from data loss, hackers and thieves.

Back Up, Back Up, Back Up!

Back up regularly. Make copies of important contents—pictures, videos, email, music, documents—and store them on a computer hard drive or through a cloud-based backup service.

Password Protect

Use a pin or password. We recommend longer and more complex passwords rather than the usual 4-digit pin.

Beware of Malware from Applications (Apps)

Download apps from trusted sources only, like the Apple Store and Google Play. Do not install any unsolicited software on your phone or tablet.

Updates

Keep your operating system and app software current with the latest updates from the manufacturer. Updates often include security improvements.

Wi-Fi Open Door

When multiple devices are logged into the same Wi-Fi account, they have much easier access to each other. Avoid using public Wi-Fi and make sure your home or office Wi-Fi is password protected so that outsiders cannot easily access it. Shut down Wi-Fi and Bluetooth connections on your device when you are not using them.

Privacy Settings

Some apps need permission to access personal information and some don't, so be careful and check the privacy settings for any app installed on your device.

Remote Erase

Install a locator app that will help you find your phone or tablet if it is misplaced. Also install an app that will allow you to remotely clear personal information if it is lost or stolen.

Never Assume Data is Unrecoverable

DriveSavers has successfully recovered data from thousands of devices with extreme physical and logical damage.

Fast • Reliable • Certified Secure
