

4 Reasons We Think You Should Upgrade Your Phone System

WHY ONLY 4? Because we don't want to scare you off with a crazy, long list.

01

REASON #1 - NEW TECHNOLOGY

New phone systems are loaded with the latest technology which can open up new possibilities for you and your business. Whether it is VoIP, Unified Messaging, or Self-Labeling Telephones; these new technologies can increase your productivity while saving you money. Our phone systems are software driven, not hardware driven, so when new features come out they'll be deployed with the software update.

REASON #2 - GREATER FLEXIBILITY

Similar to how you gain peace of mind from having a modular system, you also gain the ability to be flexible in your design. The system is designed to meet your needs, not the other way around. Our phone systems don't tie you down to one single brand. They are cross-compatible, allowing you to utilize different handsets based on the needs of your staff as well as protecting your investments for the future.

02

REASON #3 - INCREASED FUNCTIONALITY

With our open standards system (which is fancy language for allowing multiple vendors to work on the same platform), you have the ability to tie your phone system into your surveillance system and monitor your property right from your handset. Skype and Lync are now available right at your fingertips as well. But hold the phone, you don't need a web browser on your computer or your cell phone anymore, your handset does all the work!

03

REASON #4 - PEACE OF MIND

By using new phone systems it is easier for your telephone equipment supplier and the manufacturer to provide support when needed. Many new phone systems are designed to be modular so that if a piece of equipment fails you only need to replace that component, not the entire phone system! Every new phone system comes with a manufacturer warranty, and often an extended warranty is available. Protect your investment and know that if something goes wrong you will be covered.
